REQUEST FOR QUOTE
Streamline Estimating Across the Organization

Simplify and Streamline Estimating

Speed the estimation process with the Request for Quote (RFQ) module that empowers sales and customer service team members to enter specifications for manufactured items. The RFQ module reduces manual effort so your team can do more in less time.

THE RFQ PROCESS

Once the data has been entered in the RFQ software, the product specifications are transferred to the estimate.

Formats support unlimited parts per sheet and unlimited sheets per estimate that are priced individually, as a gang, set or kit.

The customer, style, quantities, shipping carrier, board, colors, box dimensions, cad files and more are sent to the estimator to verify the layout, machine routing and other costs to generate the price quote. The RFQ module empowers the sales and customer service team members to speed the process from quote to order.
